## Change Calendar of an event or task

Posted by txusmi - 2010/01/18 04:13

---

I am creating a GTD implementation skin with Rainlendar's API and LUA. I need a button for change the calendar that host a task. I can't find the way to do this in the documentation. It is possible?

Thanks for this incredible and powerfull tool.

If you know the UID of the task you can read it as a string with `Rainlendar_GetComponent()` function. After that you can use the `Rainlendar_CreateComponent()` to create it to the other calendar and `Rainlendar_DeleteComponent()` to remove it from the original place.
