# Rainlendar 2.7 BETA build 86

Posted by Rainy - 2010/01/24 06:15

_____

Build 86 can be downloaded from here:

Windows (32-bit): Rainlendar-2.7.b86-32bit.zip
Windows (64-bit): Rainlendar-2.7.b86-64bit.zip
Linux TAR (32-bit): Rainlendar-2.7.b86-i386.tar.bz2
Linux DEB (32-bit): rainlendar2-pro_2.7.b86-1_i386.deb
Linux TAR (64-bit): Rainlendar-2.7.b86-amd64.tar.bz2
Linux DEB (64-bit): rainlendar2-pro_2.7.b86-1_amd64.deb
Mac OS X (Intel): Rainlendar-2.7.b86.dmg

This is beta version! It has not been tested.

The addons for Shadow4 skin 1.6:

http://www.rainlendar.net/download/1.6/Shadow4-Widgets.r2skin-addon
http://www.rainlendar.net/download/1.6/Shadow4-Languages.r2skin-addon

Changes:
o Switched back to wxWidgets 2.8.
o Setting a task completed will change the status correctly on Outlook too.
o The url field for events and tasks can now use wiki style link formatting.
o The todo list settings (e.g. the sorting orders) can be changed now from the options too.
o Added support for "exevents" for the xml format skins.
o Added a special "" category which hides the event/task from other windows except the alarm.
o Fixed a crash bug when the calendar is reloaded at the same time the user chose an event from the menu.
o The year, month and day in the keywords can be replaced with YYYY, MM and DD to represent the next date from today. E.g. "".
o Added possibility to define the height and width for the Shadow4's calendar window from the settings.

_____

Thank you for adding  Rainy!

In the help file you may want to edit your entry for them.

For your example, you have:

NOTICE, the closer has no "ex".

_____

Great  :P

It was impossible for me to use beta 85. It just froze when trying to install addons.
Now everything is back to normal. (wxWidgets 2.8???)

_____

I notice I a not able to update password for a network calendar.  I believe this was working in the stable release.  I can remove and add the calendar again that seem to be working but update the password does not work.  I am using it to monitor ics calendar file from a Zimbra server and our password need to be changed every once in a while.  This is not specific to build 86, I think it broke a few versions back.
Thanks

_____

Doesn't seem to pull existing descriptions from RTM.  Using Deb 32.

_____

The problem with the password fields will be fixed in the next build.

The descriptions work only if they were created with Rainlendar (i.e. the note's title is "R2:description").

_____

Hallo there

I just wanted to remind you on this here.

thanks in advance!

_____

On Snow Leopard it seems to me that after waking up the iMac from hibernation Rainlendar can't refresh anymore. The dates are not shown anymore and the menubar icon shows the spinning refresh sign but never finishes refreshing.

_____

When creating a recurring event in Rainlendar itself, it seems that Google Calendar can't load the event properly. There's the whole reminder group missing. Also,it never seems Google Calendar finishes loading - there's always the "Loading"

notification in the upper right corner.

I have set Rainlendar to use default Google - reminder methods.
Strange thing is, when one creates a non-recurring event, the event can be loaded successfully.Reminder groups are also loaded.

Thanks in advance!

On Snow Leopard it seems to me that after waking up the iMac from hibernation Rainlendar can't refresh anymore. The dates are not shown anymore and the menubar icon shows the spinning refresh sign but never finishes refreshing.
I can reproduce the problem with the events not loading but not the never ending reload. For some reason Google returns zero events when reading them after suspend but manual refresh does fix the problem.

When creating a recurring event in Rainlendar itself, it seems that Google Calendar can't load the event properly. There's the whole reminder group missing. Also,it never seems Google Calendar finishes loading - there's always the "Loading" notification in the upper right corner.
I'm not able to reproduce this. Have you defined the default notifications in the Google Calendar? The "Default Google methods" won't set any alarm without them.

Yeah, the default notifications are defined.I also tried using "Default Google notifications", but that didn't work either.

That's what I do :

Create a recurring event (yearly)
Enable the reminder on that event
Save it into my Google Calendar (not the main one, though)
It seems that it doesn't work when creating a yearly recurring event.I have tried creating a monthly recurring event and it worked.

_____

It don't seem to work on Mac OSX Leopard...

Message :
Dyld Error Message:
  Library not loaded: @executable_path/../Frameworks/libcurl.4.dylib
  Referenced from: /Applications/Rainlendar2-Pro.app/Contents/MacOS/Rainlendar2-Pro
  Reason: Incompatible library version: Rainlendar2-Pro requires version 6.0.0 or later, but libcurl.4.dylib provides version 5.0.0

I opened Rainlendar2, and yes, the library inside is really libcurl.4.dylib

_____

Yes, the yearly recurring event seems to have the problem. The reminder is set exactly the same way for it as any other recurring event so I think this is a bug in the Google Calendar. I wonder what's the official way to report these kind of issues to Google...

========================================================================

# Re:Rainlendar 2.7 BETA build 86

_____

The library itself is fine but it doesn't get loaded because of the dependencies. I'll fix that.

I wonder what's the official way to report these kind of issues to Google...Hmm, maybe the fact that it's a yearly recurring event is a problem.I've never worked with an .ics file, but I had a look at how Google and Rainlendar define a yearly recurring event :

Google :
RRULE:FREQ=YEARLY;WKST=SU
Rainlendar :
RRULE:FREQ=YEARLY;BYMONTHDAY=3;BYMONTH=3

Maybe Google can't load that specific line and 'crashes'.Vague theory, I know , but maybe it'll help :D

_____

I tried it without the BYMONTHDAY and BYMONTH and it does seem to work better. I'll make the change permanent in the next build.

_____

Hi,

I tried beta 86 on windows to have Google calendar's alarm working, it's working fine but I can't have this version lanching automatically.
If I understand this thread, this is expected behaviour.

I don't want to stop version 2.56 (b82) and start beta 86 each day, so how can I have the beta version launch and not b82?

If I copy the content of the beta folder inside the stable-version folder, replacing existing files, is it going to work?

========================================================================

# Re:Rainlendar 2.7 BETA build 86

_____

If you have the both versions in your Program Files folder you can just rename the old folder e.g. to "Rainlendar2-stable" and the beta to "Rainlendar2".
