## \"Suggestions\"

---

Hi!

I really liked the "layout" feature of the previous Rainlendar and miss it in V2. I never did figure out the "layout type" so my first suggestion would be to name them something other than letters. I particularly liked the horizontal/vertical count fields which allowed me to make it look the way I wanted it on my desktop (see attached screen cap). Can we have these features back again, please?

Maybe a variance on this would be to have "X" months displayed with the ability to position and lock them together (as a whole) in the horizontal/vertical configuration of the user's choice (e.g. 4 across the top row, 3 across the 2nd row, 2 across the 3rd and 4th rows, and 1 on the bottom to make the whole year visible as a corner piece).

Thanks!
