
Copy data from comp with XP to comp with W7

Posted by hgeurten - 2010/01/31 09:59

Please is somebody there willing to tell me how to proceed in copy the data (events etc.)from my XP comp, to my other computer with W7.

I did try all info gained from your forum, but I do not succeed.

Thanks Rainy, bud I found the answer a cople of days ago by myself.

I renewed installed rainlander on my W7 system and different then before, I installed for ALL USERS, while befor I only allowed myself.

After that I did export from XP sytem and Import in W7 sytem and all looks good now.

Regards

HG

I am having the same problem. I read that I should make a rainlendar2.ini folder in the same folder as the .exe file. I made one on the XP computer, copied it to my flash drive, and installed it on my Windows 7 laptop. None of the "events" or "to do" items transferred. I have the Rainlendar Pro 2.6 and it is linked with Outlook 2003. I did install it for all users.

Thank you very much for any help you can give me.

I reread the thread. I saw that I should export and import. I did that. It worked! Thank you very much for such a wonderful software program. It's GREAT!
