
after installation 2.0.1 only iCalendar

Posted by MultiSpeedKing - 2006/12/06 05:48

Hi,

after the update from 2.0.0 to 2.0.1 I can only add Calendars in iCalendar-Format no more Network Shared Calendar or Outlook.

I have allready uninstalled Rainlendar and installed some times, but it won't be better. :(

Furthermore if I will check for updates, there comes a Message, that there are no connections to Server.

Are NetworkPlugin.dll and OutlookPlugin.dll in C:\Program Files\Rainlendar2\plugins?

Get the Pro version and reinstall.
