
Catagories List does not match INI

Posted by sholmes1 - 2006/10/30 16:06

When using an old skin and adding a new event to the calendar the catagories don't match the Profiles in the INI file for that skin.

The categories are not taken from the skin. They are defined in the Advanced Options.

I see now. In the old version it was based on the Profiles in the INI. I just deleted the Catagories I did not need and added the others to match what is in the INI in the Advanced setting and now I see only the catagories I am looking for.

Thanks...
