## Reminders showing up on iPhone?

---

Hi there folks again,

a Friend of mine is using rainlendar syncing with Google calendar and then his iPhone 3GS & I've noticed something.

If I make a event entry with a reminder on the iPhone 3GS it pops up on the iPhone and on his PC but if he makes an event on rainlendar with a reminder it "forgets" the reminder and doesn't alert him to the event. Is it possible for the reminds to appear on both calendars no matter where the event started?
