solved: Ex- and include categories
Posted by Co2 - 2010/03/05 09:47

_____

Hi,

first of all: sorry for my bad english :-)

I sync my to-do list with outlook. I have to much items in the to do list, that it appears a scroller. For that I thought about creating two to do lists, showing different categories.

But if I do so and write the name of the categories (the categories I use in Outlook) that I want to exclude in the first or second to-do list in the field "exclude category" the name of the category disappears, when I klick OK.

It seems, that Rainlendar is not able to use the categories that I use in Outlook.
How can I make them work together?

Greetings and thx

Co2

used skins: chromophore Shadow 4
