
Advice on Skin

Posted by Zen - 2010/03/10 03:43

I like the Wallpapers on my desktop. And they change often and most skins look terrible mixed with nice pictures unless there like shadow and are transparent. I also like normal calenders that are big and take up a fair amount of room. So I started editing the iCal background and setting and got this.

Example with both Dark and Light Wallpapers

I was wondering if:

- Possible to make the Day Layer on top (Not really necessary since it might look better this way)
- Formatting the text in the tooltips in any way. Even just bolding the title.

And overall, what would make this skin look better?
