## skin 42647 and old format skins generally

Posted by °jh - 2010/03/11 03:28

---

I like this particular skin very much:

<http://www.customize.org/rainlendar/skins/42647>

It is, however, in an old version format.

Is there an easy way to adapt the old skin for a new wine, the current format?

°jh

As far as I know there is no conversion tool so you would have to create convert the ini file to xml manually.

---

Are there any instructions how to do it?

There is a skin tutorial in the help file which describes the basics. It's probably the best place to start.
