
Rainlendar 2.7 BETA build 87

Posted by Rainy - 2010/03/13 14:35

Build 87 can be downloaded from here:

Windows (32-bit): Rainlendar-2.7.b87-32bit.zip
Windows (64-bit): Rainlendar-2.7.b87-64bit.zip
Linux TAR (32-bit): Rainlendar-2.7.b87-i386.tar.bz2
Linux DEB (32-bit): rainlendar2-pro_2.7.b87-1_i386.deb
Linux TAR (64-bit): Rainlendar-2.7.b87-amd64.tar.bz2
Linux DEB (64-bit): rainlendar2-pro_2.7.b87-1_amd64.deb
Mac OS X (Intel): Rainlendar-2.7.b87.dmg

This is beta version! It has not been tested.

The addons for Shadow4 skin 1.6:

<http://www.rainlendar.net/download/1.6/Shadow4-Widgets.r2skin-addon>
<http://www.rainlendar.net/download/1.6/Shadow4-Languages.r2skin-addon>

Notes:

After making the builds I noticed that the default value for the past events is set to 7 days so if you install this build you might want to change it from the advanced settings.

Changes:

- o The calendar's password couldn't be changed from the options. Fixed.
- o Yearly recurring events with alarm caused problems in the Google calendar. Fixed.
- o Fixed issue with Outlook recurring events which caused corrupted events in Rainlendar.
- o Remember The Milk authentication token is now cleared only if the server returns proper error.
- o The events from Google calendar were not read properly after resuming from suspend mode. Fixed.
- o Fixed a crash bug with the start another instance dialog.
- o Google missed the last day of the recurring events which defined the "until" as the end. Fixed.
- o Outlook alarms were set too far in the past. Fixed.
- o The event list can now show items from the past too (Options->Advanced->"Number of past days the list shows").
- o The pastitem and pastheader can be used to customize the past events in the list.
- o The past events can be hidden from the event list with Options->Advanced->"Hide past events".
- o The event and task list track now the state of the past/overdue items and update the list when necessary.

Rainy,

Excellent work as well, seems to be very stable..

One thing I noticed, when using the RSS module, I cannot get it to parse a local rss file that is constructed on my NAS drive..

I have attached the file below.. The RSS Widget just returns a failure..

Happy to attach the logs if required.. <http://www.rainlendar.net/cms/images/fbfiles/files/w2w.xml>

I was momentarily excited by...

- o The past events can be hidden from the event list with Options->Advanced->"Hide past events".

...However it wasn't what I was after.
I'd still like to hide (and optionally delete!) all expired events in the Manager event list.
It might also be useful to hide past events from the calendar itself as old events can clutter the view.

Anyway, excellent work!

Hello Rainy,

Thanks for the continued updates :cheer: .

I am no longer able to customize the manager:

column order (also no longer available on the options
column sort order (double clicking the column name sorts Start Date but not that column))

This is making mass changes difficult. I created a new calendar list and moving the item is taking added steps for each entry.

Thanks

JW 'Yawn' vanLohuizen

ozgreg, the script seems to assume that the download failed if it doesn't come from a web server. I can fix that.

GregDude, the Manager does need some work but that'll have to wait until 2.7 is ready and released.

JWvanLohuizen, I had to go back to the old version of wxWidgets which doesn't support customization of the column headers. The functionality will be back as soon as the library is stable enough to be used.

Hello,
I try to use the Serbian language, but don't want to show in the options.
Normal or Not :blush:

Oops, my bad. I forgot to remove some debugging code which invalidates the authentication token on refresh/restart. I'll fix that in the next build.

Re:Rainlendar 2.7 BETA build 87

Posted by ozzii - 2010/03/19 15:32

And about the language ?

=====

Re:Rainlendar 2.7 BETA build 87

Posted by Rainy - 2010/03/21 06:30

It looks that the language code for the Serbian has changed so it's not loaded anymore. I'll fix that.

The duplicate feature for Google Calendars seems to be buggy in this beta version. Here's what I did:

1) Duplicate my existing personal Google Calendar in order to create a second calendar for "German Holidays" that I've added in the Google Calendar web interface under "Other calendars". After adjusting the calendar name in the duplicate, press OK.

2) Authentication will fail, although it seemed the password entry was successfully duplicated (there were stars in the password field).

3) When going back to the calendar options, find that the duplicate has lost most of its settings, and the original Google calendar was modified with the settings previously entered for the duplicate.

PS: It would be very helpful if both the "Add calendar" wizard and the Google Calendar settings had a combo-box which list the available calendars instead of an edit field. This would avoid typos for quite long calendar names like "Contacts' birthdays and events".

eybex: Confirmed. I'll fix that.

ozzii: You'll have to wait for the next beta release.

OK.

I've asked, again, because I thought that the problem is the language file and not Rainlendar :blush:
