
Sunbird (ics) minor bugs

Posted by raimi73 - 2006/10/30 16:32

Fantastic piece of software! Unfortunately a few annoying bugs left:

Some events from sunbird ics-file are not shown (I assume recurring events)

The events are not show in the right order - i.e. for example event from 15:00-17:00 is show before event from 14:00-15:00...

ToDos are show with incorrect priority-level: ToDos market in sunbird as "High" are show in Rainlendar as "Low" and vice versa

Regards,
Mike

Can you attach one of the events that are not shown in Rainlendar? I can take a look at it.

The todo priority issue will be fixed in the next version as well as the event order (assuming I can reproduce it).

Thanks for your reply!

Attached sample.ics contains an event that is not show in Rainlendar.

Its an recurring event (every Mon, Wed, Fri 18-20) in Sunbird. I changed the event for Mon 11/6 to last from 19-20 and from then on rainlendar only shows this changed occurance of the event, missing all the regular occurances.

Appreciating your help on this!

Mike http://www.rainlendar.net/cms/components/com_joomlaboard/uploaded/files/sample.ics

Hmm... there are two events in the file and both have the same UID. I didn't know that was even possible. I'll have to think about what is the best way to support this.
