
Hiding Rainlendar?

Posted by maximus - 2006/10/28 19:42

How come you can no longer hide Rainlendar from view like in the previous version? I tried to double click the icon in the tray area like in the other version but nothing happens. Can you please bring this back?

The setting is quite well hidden :-)

Go to Options->Skins, click on the advanced button, select TrayIcon from the active skins, click Settings and choose "Toggle Windows" for the Double click action.
