
Can't delete skin from \"Available skin\" tableau

Posted by mrskona - 2010/04/02 16:08

Hello everybody,

checked out "SimpleNote" skin for Rainlendar. Didn 't work as I thought, so wanted to cancel it again from my skin tableau in Rainlendar (options>skins). But can't to this. It stays in the field "Available skins". What ever I do. I cancel my personal configurations for Rainlendar, then the whole programm, download again, set up: "SimpleNote" skin is still there. ???

Who can help?

Regards,

lena

An addition:

Of course I canceled Simplenote from the skin folder in

C>Programme>Rainlendar2>skins

So: it's not there, BUT it's still in the "Available skin" tableau of the Rainlendar Options menu. At it returns whatever I do!

:unsure:

:woohoo:

I got it, ... found my hidden Easter egg!!

Was in C>User>Username>AppData>Local>Virtual Store !!! Vista special???

Cancel the file there and it disappeared from my tableau.

Puh!

Happy Easter,

lena :P
