
Sync shown in skin

Posted by liquidbrain - 2010/04/09 21:55

I'm making a new skin and i wanna put a little animation showing when Rainlendar is synchronizing with Google Calendar.

Is it possible? At least is possible to put an icon instead of an animation, or only can shows this in trayicon?

Currently the sync status can be shown only in the tray icon. I can add events for it though so you can run lua scripts when the sync is ran.
