
Rainlendar 2.7 BETA build 88

Posted by Rainy - 2010/04/10 09:54

Build 88 can be downloaded from here:

Windows (32-bit): Rainlendar-2.7.b88-32bit.zip
Windows (64-bit): Rainlendar-2.7.b88-64bit.zip
Linux TAR (32-bit): Rainlendar-2.7.b88-i386.tar.bz2
Linux DEB (32-bit): rainlendar2-pro_2.7.b88-1_i386.deb
Linux TAR (64-bit): Rainlendar-2.7.b88-amd64.tar.bz2
Linux DEB (64-bit): rainlendar2-pro_2.7.b88-1_amd64.deb
Mac OS X (Intel): Rainlendar-2.7.b88.dmg

This is beta version! It has not been tested.

The addons for Shadow4 skin 1.6:

<http://www.rainlendar.net/download/1.6/Shadow4-Widgets.r2skin-addon>
<http://www.rainlendar.net/download/1.6/Shadow4-Languages.r2skin-addon>

Changes:

- o Added location, categories, priority and url support for the quick add.
- o Dismissing Google calendar's event from Rainlendar didn't work. Fixed.
- o RTM authentication got broken in the previous build. It should work now again.
- o Links and keywords didn't work in the schedule. Fixed.
- o Added possibility to define the width and height of the week days rows & week nums columns in the calendar.
- o Added possibility to show the event text inside the calendar too. The month view in Shadow4 skin shows this.
- o The schedule items can now show the start/end time, location and calendar.
- o The skins can be deleted from the context menu in the advanced skin options.
- o QuickAdd could create tasks to a calendar which didn't support them. Fixed.
- o Made autoscroll optional in the schedule views.
- o Right mouse button actions didn't work for the list item buttons (e.g. in alarm). Fixed.
- o Duplicating a calendar didn't save its settings. Fixed.
- o If "Support Mozilla alarms" is enabled Rainlendar now also updates the X-MOZ-LASTACK property when the alarm is dismissed.

Hi,

Thanks to have fixed the RTM login.

But I have a new bug with line calendars (horizontal & vertical). My English isn't good enough to describe it correctly, so look at the screen shots:

<http://img717.imageshack.us/img717/7111/20100416085119.th.png>

<http://img691.imageshack.us/img691/5350/20100416085151.th.png>

Additional info:

- Same bug appears with a clean new instance
- Windows 7

Having problems with Remember the Milk (RTM)...

Added RTM to Rainlendar.

Carried out authentication.

Seemed to work OK.

Added RTM sidebar to Google Calendar.

RTM no longer working in Rainlendar (could be coincidence?).

Removed RTM from Rainlendar (via options).

Removed Rainlendar from RTM (via settings > services).

Re-Added RTM to Rainlendar (did not ask me to login/authenticate - info must have been saved somewhere... but where!?).

Still getting RTM error in Rainlendar

Remember The Milk Error! Server returned result: (0) 503 Service Unavailable.

Remember The Milk Error! Unable to parse the output.

UPDATE: Error seems to have changed to...

Remember The Milk Error! Call "rtm.tasks.getList" failed. Server currently unavailable.

Any idea why this is happening? I can see RTM is working via their site on my PC, and via the sidebar in Google Calendar.

How can I completely remove RTM from Rainlendar, so that it asks me to reauthenticate?

Thanks.

For the event list the number of future days the list shows is off by one. 3 future days actually only shows 2. :(

I am having the same problem, both with 2.6 and 2.7b88:

Remember The Milk Error! Server returned result: (0) 503 Service Unavailable.
Remember The Milk Error! Unable to parse the output.

There is no option to reauthenticate, even when I try adding a second RTM calendar. I also notice it seems to be working on the rtm site but I have no other way to test it

:S

Another issue I have found is that I cannot change the option to show start or end times on the Event List. I have to edit the choice in the .ini file.

Remember The Milk Error! Server returned result: (0) 503 Service Unavailable.
Remember The Milk Error! Unable to parse the output.

these errors disappeared today so i suspect it was a service issue with RTM?

The vertical and horizontal line calendars will be fixed in the next build.

For the event list the number of future days the list shows is off by one. 3 future days actually only shows 2
The new phrasing changed the meaning of the setting. I'll fix that.

when i try to assign a color with the categories such as etc. it doesn't work with QuickAdd, the other categories are fine
The non-word characters break the parsing. I'll have to make some changes to the regexps.

Another issue I have found is that I cannot change the option to show start or end times on the Event List.
The settings for the schedule items conflict with the event list. Will be fixed.
