
Recurrence date problem?

Posted by sholmes1 - 2006/12/07 19:53

I am using 2.0.1 b29 and notice something that might not be a bug, but a nice change for the future. When I select Recurrence for an event and then select "Until" in the Repeat section it shows today's date on the calendar and not the date of the event that I am adding. I was adding a number of events for next year that I needed to repeat and it was a pain to scroll from current date all the way to the date I need the event to end.

Any way to change this to show the date of the event instead of the current date?

P.S. I like the exception dates feature :)
