
able to hide/show category entries

Posted by lilplaytime - 2006/12/08 03:32

Hello,
It would be helpful to hide/show specific categories.
For instance, I have many birthday entries and they can get in the way, "visually" that is, when I'm trying to see the weeks events.
I could create a separate calendar for birthdays or each calendar, but that would a pain.
Thanks for your consideration.

There have been no replies to this thread. Is this functionality already available or some kind of work around. Or is it just not a good suggestion?

Category filters are in my todo list so the feature will be implemented in the future versions.

Cool. Is there any place to see previous suggestions/road map of new features to come? Or the same suggestions may kept being posted to the forum.
