## Dates for an Event

Posted by mni - 2006/12/08 04:25

---

Hi,

following issue:

New Event

Start Date: 11.12.2006

End Date: 03.01.2007

(holidays :)

When entering the '03' for the day of the end date, the day of the start date is adjusted, too.

I can understand why Rainlendar does so, but it should wait with correcting until it knows which month I mean, because working this way Rainlendar always makes me quite aggressive when entering Events for more than one day...

I'm using RL2.0.1(b28).

Cheers

S.

I'm not sure if that's possible to fix. The calendar control sends the notifications immediately after something has been changed so the program doesn't know when the editing has been finished.

Ok, I can live with that, too. I just have to get used to your fresh new rainlendar (yeah, things were much simpler with the old one \*sigh\* I'm starting to talk like grandpa, sorry).  
But at least this was something to think about. Just add it to your '3.0 nice to have'-list, please.
