
rainlendar + outlook + active sync + pda?

Posted by rascal - 2006/12/08 04:34

hi mates, here's my question

i have a server (win2000) running, i have a smartphone with windows on it.

till now i entered my tasks/schedules into the pda or the outlook on the server and they sincronized.

i heard about rainlendar and thought it would be nice if my wife could also use the calendar data during she's at work and enter data to it, so i can see them on my pda when sincronized.

is this constellation possible?

will rainlendar sync automaticaly with my pda?

if so can i sync my pda via internet with rainlendar?

i'm looking for quite a while for such a solution already, but the only alternative was to buy the microsoft exchange server (i'm not that stupid!)

don't smoke and fly

Martin

If your PDA and the sync application that you use support ics files then at least in theory this would be possible. However since I haven't heard of any such setup my guess is that this is not possible.

is there any chance that it will implemented in the near future?

Re:rainlendar + outlook + active sync + pda?

Direct sync with PDAs is probably not going to be implemented any time soon. There are some plans to support two way sync with Outlook in the future which would make it possible to get Rainlendar's events at least into some PDAs.
