## Suggestions : snooze, alarm window, tasks...

Posted by Kosmo - 2006/12/08 06:40

---

First of all, I apologize for my poor english :blush:

I have some suggestions to propose :

- with the new version, it's possible to define a snooze between 1 minute and 2 hours. It's cool and it's why I have finally installed Rainlendar on my computer (I used Active Desktop Calendar before). It would be great to have a textbox to enter the delay we want and a combobox for the unit (minute, hour, day, week). I have to choose 1 day, 1 week, 4 hours, ...

- it would be great to have an option to make the alarm window not always at the top

- I need to define tasks with a recurrence and not only events: every day, at 5pm, I have to do an administration task for example.

- I need to define alarms for tasks or events without seeing them in the tasks or events lists on the desktop. A checkbox to say visible or not in the list would be great.

That's all...

1. That would require a new dialog. I can think about it but I'm not making any promises.

2. I can make an option from that.

3. The tasks can already have recurrence. Or what exactly was your suggestion?

4. I would imagine the event filter (once implemented) would make this possible. There most likely won't be a checkbox for this though.

Thanks for your reply.

For point 3, the recurrence is available for events and not for tasks.

For point 1, could you add "4 hours", "1 day", "1 week" to the existing list in a first time or the possibility of defining the list in the options ?

I have a todo entry to make the snooze options user configurable so it'll probably be implemented in some future version. However since the snooze time isn't saved permanently it's not very useful to use very long times (the alarm will pop up always when Rainlendar is refreshed/restarted).
