
Sorting todo items in Manager chrashes Rainlendar

Posted by schendi - 2006/10/30 20:06

The following bug report refers to the Windows version.

If I try to sort the todo items in the Manager by "Priority" or "Status" Rainlendar crashes.

All the other categories seem to work (also in events).

:blink:

After figuring out how to display 3 month at once I really start liking version 2 now :woohoo:
