
Rainlendar on mobile phones?

Posted by mystvearn - 2010/06/05 16:53

Hi,

I am finding that I have to bring my appointments on the go now. The only problem is that I don't want to splash out a lot of cash for a mobile phone. I have a SE C510. I tried myphone explorer software for SE phones, but it does not sync the calendar so well. Anyone has any suggestions on calendar on the go? Maybe a better software for C510?

I don't mind not direct syncing my phone with google calendar as I can always upload meetings using the internet and just use the phone to check on what they are. The only phones which come to mind are iphones, android phones and blackberry for having rainlendar on the go. These are quite expensive and I am sure I will not use all of the features of the phone. Or maybe there are cheap phones which I can splash out once without the using contract like a prepaid/pay as you go. Phone suggestions would be great too. I don't need/use internet on the phone as I always use the cable to sync stuff.

Thanks

=====
