
Problem with Events list

Posted by Pyrex - 2006/12/10 01:28

I'm having trouble with my Events list. Specifically, it's displaying all upcoming events for the next week, and all I want it to do is display the events of the current day.

So far I've gone into the Advanced Options under this option:

"EventsListShowComingEvents 7"

I tried to change it to read:

"EventsListShowComingEvents 1"

I think this will change the Events list so that it'll only show the current day's events.

But after clicking OK, nothing changes, and after going back to look at the advances options again, this setting goes back to reading 7.

Is there anything I can do to stop this? Is there any way to manually edit the options file to set this to only list the current day's events?

Any help greatly appreciated!

Strange, changing the number like you said through advanced options, works fine for me. Did you renew automatically and/or by hand?

Maybe you can try to edit the rainlendar.ini file. By default it is in C:\Documents and Settings\USERNAME\.rainlendar2\ if you using WinXP. In the DefaultSettings section you'll find: EventListShowComingEvents=7. Change it to '1', save the file and restart Rainlendar.

Build 28 has a bug in the EventsListShowComingEvents. This has been fixed in build 29.

Thanks Alf, I never would've guessed where that config file was if someone hadn't told me. It works fine now.

As for you Rainy, lemme know when build 29 is released :P
