
More hotkeys actions & Toodledo integration

Posted by andygrunt - 2010/06/18 07:55

I'd like more options to be available for the hotkey treatment. For example, I'd like to be able to add a hotkey to bring up the 'Manager' window.

I'd also like to be able to display and manipulate ToDo items from my Toodledo account.

Thanks.

Just open the hotkeys.lua and add this to it to open the manager:

```
function Hotkey_Show_Manager()
  Rainlendar_OpenDialog("Manager")
end
```

Here's how to enable and disable a certain calendar (replace the "Default" with the name of your calendar):

```
function Hotkey_Enable_Calendar()
  Rainlendar_EnableCalendar("Default", 1)
  Rainlendar_Redraw(0)
end
```

```
function Hotkey_Disable_Calendar()
  Rainlendar_EnableCalendar("Default", 0)
  Rainlendar_Redraw(0)
end
```

Re adding a hotkey for the Manager window... Brilliant! it works a treat. Guess I need to be careful when I install a new Beta not to overwrite the lua file, right?

It does make me wonder why you don't just add everything into that hotkeys lua file that can be given a hotkey.

I'm really puzzled by the code you added to enable and disable a certain calendar. Is that related to my Toodledo question? If so, I don't get it I'm afraid - can you explain further please?

Thanks.

You can create a new file with .lua extension and put your own functions to there so they don't get overwritten when you install a new version.

Ok, thanks. All this LUA stuff is new to me.

Thank you Rainy. Though not being a total newbie, all these useful things are hard to find for someone who is not a rainlendar expert. Thanks!
