
Problem with backslash in r2shin(zipped files)

Posted by PoP - 2010/07/16 03:39

Hi,

Apparently Rainlendar2 cannot read my zipped skin because the pathnames are backsklashed (Windows platform). I expected my two zipper (7zip, lzarc) could offer the option to convert \ to / but they don't, even for .jar files. Hopefully such an option will be included in the future. Anyway the ability of rainlendar to read W or X path formats would certainly be appreciated too.

All the best,

Pierre

Are you using the backslash in the xml files or where exactly is this problem? Can you post a download link to the skin which Rainlendar doesn't read and also tell which operating system you are using?
