## Moonphases. North Hemisphere. South Hemisphere.

Posted by Jorge\_Luis - 2010/07/16 17:07

---

Not everyone lives in the Northern Hemisphere (well, at least not me B)) so the moon phases in this hemisphere are "upside down" :silly: . Using the moonphases.png, i modify it to show how actually the view is (only a 180° rotating for every frame).

You could add an option inside the window to select the hemisphere (0: northern 1: southern, or in the other way, for me is the same thing) and show moonphases\_north.png or moonphases\_south.png...

Thanks for the image. I added the variable to the moonphase widget.
