
Restore Backup files Bug

Posted by evanade - 2010/07/22 04:12

OS: Windows XP

I'm trying the restore function but I find there may have a BUG.

I had used manager to backup the file just after installing to keep a default backup file.

If I try to restore with this file and saw the successful msg, the rainlendar2.ini in .rainlendar folder just not change and after refresh the setting remain the form before.

I've tried just to edit the rainlendar2.ini in .rainlendar folder and then refresh Rainlendar, the ini file become the form I edit before :S .

But if I quit Rainlendar and restart it, the ini file keep the form I edit and the setting is correct. B)

Maybe it's the restore bug that Rainlendar just refresh not quit after restoring.

You cannot make changes to the rainlendar2.ini file when the application is running but the restore should be able to reset the settings. I'll check that.

Thanks Rainy.

Sorry my English is not well and post so many articles to bother you.

I'd like to see this software will be much better.

Thanks so much to you.

I love Rainlendar!!

XDD

Did this bug fixed in 2.8 b92?

I have installed b92 but it seem not fixed...

Yesterday, i want to do some testing, so I backup my current layout.

Today earlier, when i restored it, the all values of option that i had changed(e.g "week's start day: Sunday") became to the values of first install(e.g "week's start day: Monday")

http://www.rainlendar.net/cms/images/fbfiles/images/2011_02_17_2.png

I had tried b102 and b103, that they have the same result.

I can not directly "rightclick > Manager.. > File > Restore" to did it,

I must turn off the rainlendar2 and manually overwrite the rainlendar.ini.

True. Restore seems to reset some settings. I'll check what causes this.
