Rainlendar 2.8 BETA build 92

Posted by Rainy - 2010/08/01 03:53

_____

Build 92 can be downloaded from here:

Windows (32-bit): Rainlendar-2.8.b92-32bit.zip
Windows (64-bit): Rainlendar-2.8.b92-64bit.zip
Linux TAR (32-bit): Rainlendar-2.8.b92-i386.tar.bz2
Linux DEB (32-bit): rainlendar2-pro_2.8.b92-1_i386.deb
Linux TAR (64-bit): Rainlendar-2.8.b92-amd64.tar.bz2
Linux DEB (64-bit): rainlendar2-pro_2.8.b92-1_amd64.deb
Mac OS X (Intel): Rainlendar-2.8.b92.dmg

This is beta version! It has not been tested.

Changes:
o The category filters are now case insensitive.
o Month view didn't show multiple events on the same day correctly. Fixed.
o Weekly recurring events did not take into account the interval when calculating the end date.
o Restoring a backup didn't apply the settings. Fixed.
o Added possibility to create custom categories for skins which support them.
o "Custom category icon path" in advanced options can be used to define a folder for custom icons.
o Added "Open containing folder" for the skin's context menu in the options dialog.
o Added %HF as header format code which will be replaced with the default header text.

_____

May I suggest some idea?

Suggestion:
"Custom category icon path" add a brower button
"create custom categories" add a default option, I make some change but don't know how to change back to skin default, and I go to .rainlendar2 folder to delete the categories.ini...... :huh:
Does Font color mean color in calendar? But I set the color then the date in calendar disappeared......

_____

1. That's was the plan but then I noticed that the property grid control only supports browsing for files and not folders. I'll have to check if it's possible to create a custom editor for the property.
2. Yes, currently the only way to clear the custom changes is to edit the categories.ini file manually. I was thinking about adding a button to the editor for this but I think the modified categories need to be highlighted also somehow.
3. Does this happen with any color you choose?

_____

Hi!
Do you plan to fix the wrong date problem of Outlook all-day events?

_____

I know what the problem.
It's about localized write in categories.ini so Rainlendar can't distinguish it.
So it works corrcetly only in English version.
This problem also happen in schdule bg setting.

for. e.g.
I set Font_color=green
the ini file show
Font_color=
so it can't display.

PS.
Has the restore problem I meet before fixed?
http://www.rainlendar.net/cms/index.php?option=com_kunena&Itemid=42&func=view&catid=4&id=12750

I don't know it's my system problem or Rainlendar's.
Cause the categories function can write in categories.ini sucessfully but I try the restore function it's can't.
Are these 2 function in different method to edit the ini file?
"Write in" and "displace file"?

_____

Ohytos: Are you referring to the issue that if you change your time zone the all day events are moved to incorrect day? I need to make Rainlendar somehow aware of the time zones before the problem can be fixed.

evanade: You are correct. The categories.ini shouldn't contain anything localized but it seems this is not the case. I'll fix that. I'll also take a look at the restore functionality again.

_____

Rainy, I've tried using the Shadow4 addon r2skin file you linked for download in your build 90 to get weather functioning again, but when I try to install it (on beta build 92, 90, etc.) it errors saying: "Unable to install the skin! The skin doesn't contain the "skin.xml" file. Are you sure this is an xml format Rainlendar skin? This us using Mac OS 10.6. I rename the file type from .zip to .r2skin in getinfo to make sure it's in the correct file type. If I unzip it, it does have the xml files in there. Can you provide assistance, Rainlendar is how I know what to wear!

_____

Suggestion and bugs? for the new "Categories..." option:

* Show some default name for small and large icon (this isn't so difficult because in the original skin are the names)
* An option to none icon?
* "Font color" always shows "Blue" (the first element in the combo list) and not the choosed font color (same in schedule font). Besides, if you want to go back to blue color you can't, because no change is detected.
* I don't know if is possible, but, after doing the categories option, could there be an option to show ordinal number in any category instead of anniversary and birthday only? (in build 90, i clear all info in Anniversary just for show those numbers)
* Not all colors are translated (only blue, brown, cyan, green, red and yellow). These color (except blue) aren't showed in the calendar, but black, white, pink... yes. (maybe this is same problem as evanade has)
* Still don't understand. How priority works?

Example:
Anniversary: Black. Game: Light grey ----------> shows Black (i want grey)
Anniversary: Black. Holiday: Yellow -----------> shows Yellow (this is ok)

Still checking... but i think this is a major improvement. i been looking for this some time ago...

The colors are stored in categories.ini in a strange way:

Font_color=bitmap.numbers.black

Font_color=Verde

_____

I come again XD

Maybe add icons manager and apply multiple icons paths are possible.
I add icon path and feel it's inconvenient to select an icon because the icons are too many and hard to find icon I want.

Here is the view I think about:

Small/Large icons " (text menu)

Then click to open a plate like calendar to selcet icon

 means icon pic
and with tooltip to show the icon's file name

Is it possible?
Or you have better ideas.

#Apply RGBA text color displace RGB
Maybe someone need this function, but maybe it is not necessary.
A's value almost 255, and A doesn't include in the system's palette.

I just preffer to edit it in categories.ini manually.

AWDriver: The file is a skin addon and not a skin so you need to rename it to Shadow4.r2skin-addon

_____

* Show some default name for small and large icon (this isn't so difficult because in the original skin are the names)
Yes, the Chromophore skin should have a default value defined for the icons since it uses one. I'll fix that.

* An option to none icon?
There is one but it's visible only when no icon is selected by default. I have to fix that.

 * I don't know if is possible, but, after doing the categories option, could there be an option to show ordinal number in any category instead of anniversary and birthday only? (in build 90, i clear all info in Anniversary just for show those numbers)
This is in my backlog so it will probably be implemented eventually. You can also use the keywords if you want the event to calculate the days/months/years automatically.

* Not all colors are translated (only blue, brown, cyan, green, red and yellow). These color (except blue) aren't showed in the calendar, but black, white, pink... yes. (maybe this is same problem as evanade has)
The colors which are not translated are new strings. It's not advised to use the category editor at the moment in any other language than in English.

* Still don't understand. How priority works?
Anniversary: Black (pri=1). Game: Light grey (pri=2) ----------> shows Light grey
Anniversary: Black (pri=2). Game: Light grey (pri=1) ----------> shows Black

... or so it should work but the priority value doesn't seem to be set correctly for the custom categories. I'll check that.

Note also that recurrence affects the priority so that less frequently repeating events get a boost in their priority value.

_____

evanade, the property grid probably doesn't support such editor which would show just the icons in a grid so I would have to create one myself. I'll see how much work it would require.

The color dialog doesn't support alpha (at least not on Windows) so it's not possible to define it in the UI. But since the values from the categories.ini are just replaced in the skin you should be able to define the alpha for the text by editing the ini file manually.
