## EventListHeaderFormat Parameters?

Posted by Jackal - 2006/10/30 22:30

---

The default display of the Event List Header only have the day of week.

What are the parameters which I can set to show?

I tried a few but I don't see one with numerical presentation of Month. Since in Chinese, the full month name does not look good with numerical day.

I hope there will be a new parameter for that.

The month is %m

There is a list of the codes in the manual (For a link see e.g. TimeFormat in the Options page).
