## Overnight events-

Posted by GreatWyrm - 2006/12/11 09:19

---

I work a night job, and I want to use Rainlendar to keep-track of my schedule.. it's annoying however to have events that start one day and end the next show-up on both days.

Is there any way to make the events only show-up on the day they begin?

You can set the end time to the same as the start time. If you need to have the end time visible you can add it to the summary text.

That works- thanks!

Also, the EventsListShowComingEvents advanced option won't change for me.. I try to set it to something other than 7, hit ok, but nothing changes, and when I go back in it's set to 7 again.
