## url icons in \"day view\"

Posted by Don Ptah - 2010/08/13 18:00

---

With all the different windows accessible in Rainledar now, one may want to compromise event and todo lists completely. E.g. I myself am more comfortable with the sole chronological day view window, in which both tasks and events reside.

Unfortunately, url icons are only accessible from the event and todo lists as of now. It would be great if you could add them to the new windows too (day view, week view and month view).

P.S.: first time poster here - never had anything to complain about or ask for before. Thanks for a great program, Rainy!  
:laugh:

I'll add that to my backlog.
