
New features from me

Posted by mxa - 2010/08/21 04:41

1. Changing the time scale (in preferences) in the Day view
2. Possibility to set completed for events, after this event mark completed or hide from day view
3. Drag events in Day view
4. When two click on header task window automatical set calendar for this new task if i have many task windows
5. More functions for right click on event in Day view
6. When i have many task windows i want to change task window header, or show name of calendar in this tasks window

Thanks!

1. Do you mean like show only hours from 8 to 20? What should be done with the events which are outside this range?
 2. I have this in my backlog but I haven't had time to implement it yet.
 3. This is a planned feature.
 4. Probably works as expected only if you have just one calendar included in the window but yes, I can do that.
 5. What kind of functions you are looking for?
 6. Currently you can do this if you choose the window from other skins. I can add a variable for the text item to show the included calendars but that won't work with the Shadow4 skin since the window's header is an image.

1. No. Now Day view has time scale in one hour only. I want set it bigger: 30, 15 or 10 minutes. Now when i put event that have 10 minutes duration i can't see it text in Day view, i see only color line.
4. Yes, it is.
5. Quick change time start and finish (without date, only time), set category, on/off alarm.
6. I understand.

Thanks.

1. That might be doable. I'll check it.
 5. Categories would require a multiselection which doesn't work very well with menus. Toggling the alarm might be useful though currently there is no functionality to disable the alarm (just remove it completely or dismiss it).
