## event list header format

Posted by Elena - 2006/12/12 00:11

---

I have set my EventListHeaderFormat as %HS, %b. %d (%D days left)  
but is there anyway to put 'enter' between the %d and (%D days left)?

As of now, it's displaying like  
Friday, Dec. 15 (4  
days left)

I want it to be like  
Friday, Dec. 15  
(4 days left)  
as my header so the part where it says how many days left doesnt get wordwrapped in the middle...

At the moment that is not possible but it is already in my todo list.
