
Syncing Rainlendar on several computers

Posted by Jonas85 - 2010/08/26 03:46

Hi.

I have three laptops, all of them have Rainlendar installed. Is it possible to make so that a change I do in Rainlendar at one computer automatically update itself to the other computers? Like automatic synchronizing between the computers.

You can do this with the Pro version. There are examples in the Rainlendar's help file how to use online calendars to keep your events in sync between multiple computers.
