## Rainlendar 2.8 BETA build 94

Posted by Rainy - 2010/08/29 07:56

---

Build 94 can be downloaded from here:

Windows (32-bit): Rainlendar-2.8.b94-32bit.zip  
Windows (64-bit): Rainlendar-2.8.b94-64bit.zip  
Linux TAR (32-bit): Rainlendar-2.8.b94-i386.tar.bz2  
Linux DEB (32-bit): rainlendar2-pro\_2.8.b94-1\_i386.deb  
Linux TAR (64-bit): Rainlendar-2.8.b94-amd64.tar.bz2  
Linux DEB (64-bit): rainlendar2-pro\_2.8.b94-1\_amd64.deb  
Mac OS X (Intel): Rainlendar-2.8.b94.dmg

This is beta version! It has not been tested.

### Changes:

- o Deleting one instance from a recurring event in the month view didn't work. Fixed.
- o Split the "Visible calendars" filter to "Included calendars" and "Excluded calendars"
- o Task in a schedule view was opened with the event editor. Fixed.
- o Added auto-completion to the category text edit.
- o The category list is now sorted on Linux and Mac too.
- o Retrying without proxy is done now also if the proxy can be connected but if fails to return any data.
- o The date format strings are now filtered for illegal characters to prevent crashing.
- o Added topmargin and bottommargin for the schedule items which can be used to add extra space to the event area.
- o You can now define the height and duration of one time item in the day and week views.
- o Outlook's all day event's day is chosen from noon instead from midnight to allow some time zone adjustment.
- o If a window defines included calendars they are selected automatically when creating a new event or task.

I found a strange behaviour with the addons. These are the steps:

- with empty Rainlendar's user folder, run b94
- install widget addon (the shadow4 skin is copied to user folder and updated with the widget addon)
- install language addon (the shadow4 skin is copied again to used folder and updated with the language addon... the widget addon simply disappear)

someone else also noticed this behaviour?

EDIT: it do the same thing a few times. Then, i try several times but can't reproduce it. So, there are two options: is something too hidden to find it... or i'm going crazy :woohoo:

Jorge\_Luis, it's probably caused by the file timestamps. Rainlendar uses those to determine which version of the skin should be used when it integrates the addon.

mx, do you mean that the view doesn't scroll at all or that it shows incorrect position (I wasn't able to reproduce either issue). Note that you need to wait for a minute before the view is scrolled automatically if you change it with a mouse.

1. When i first launch build 94 scroll dosnt work, but after some time it start working.
2. Sometimes when i add new event, Day view scrolling to the bottom
