
New features

Posted by mxa - 2010/08/29 12:23

1. If i add 3-5 All day events in Day view its shown with a scroll. It`s inconvenient
2. Outlook have a good feature (in red circle):
<http://s50.radikal.ru/i129/1008/39/98d1c79ac135.jpg>

If you click on this triangle Outlook will show the next event that is invisible now, its below calendar window.

3. When show synchronized events from Outlok, i cant see color category from Outlook. It`s inconvenient.

Thanks.

1. It's possible to extend the all day area's max size. I can make a variable for it.
 2. Yes, that could be useful. I'll see if it's possible to implement.
 3. Are you referring to the labels? You can enable the "Use labels instead of categories" in the calendar's options to make Rainlendar to read them instead the categories (you need to define the appearance for the items yourself though).

Thanks.

3. But where i can define the appearance for the items?

Currently you need to edit the skin (you can find instructions from the help file). In the latest beta releases there is a category editor in the skin options which makes customizing easier.
