## Creating new icon

Posted by chaneyd - 2010/09/09 11:11

---

Not sure if this is the right forum. I added 'Appointments' to the list of events and wish to create or use an existing icon for it. How do I do this?

Thanks in advance.

For an existing icon go to: right click -> options -> skins -> categories -> (the category you want to edit, or 'add' if you want a new one) -> small icon / large icon.

If you want new icons, you need to add the new icons into the skin file.

I see options - skins - but no categories. I see skins available and active skins.

Oh, sorry, my mistake. That option is only new in 2.8 beta version. If you're using 2.7 or previous you need to edit the skin file manually. Make a copy of the skin file in the user folder (.rainlendar2) and you need to edit /xml/elements.xml and /images/icons/ inside the .r2skin file. It's not an easy thing, well at least not too easy.
