
[TEST] ŒÜ Lᄇ

Posted by Realman - 2010/09/09 23:08

ŒÜ Lᄇ,

This board seems not to support uni-code. I wrote in Korean, but letters are broken. :(

I see, for example, Œ which is an unicode number, but the amp is written with the HTML entity (You can view it in the page source code). So, the letters are broken.

Test: Œ
