## a syntax for circle around the current day

Posted by leopoldus - 2010/09/11 05:38

---

Hello,  
Could anybody hint me, which section and which line in the .INI file of RL skin is responsible for the emphasizing way of the current day. For example in the skin Shadow4 there is a red circle around the current day (see the picture below). How can I add the same circle around the current day in the month calendar in the skin Impared-Rain?  
Thanks!

In ini format skins the today image is defined by "TodayBitmapName". I suggest that you download different skins and see how things are done in there.
