
Quick question about PRO version.

Posted by swiatkoni - 2010/09/15 05:18

Quick question from my boss.

If we buy 5 licenses for 5 users, each installed on different computer, will our boss be able to organize events as an administrator, giving each user, different tasks and events?

Or will rainlendar just share one common callendar with all events put all together, for everybody to see over the network?

how does that work?

It is possible to have multiple calendars in Rainlendar so that should be doable. I'm not sure though how well Rainlendar suits for your purpose since it's not really meant to be multiuser calendar solution so I suggest that you try it first.
