
Proper Evolution support on Linux

Posted by izzy - 2010/09/18 04:11

Hello,

currently Rainlendar supports access to Evolution calender only directly by reading the ics file, which leads to read-only access to evolution events.

It would be great if Rainlendar would use the proper evolution libraries to access the Evolution Data Server - it this way you could also create and edit events with Rainlendar and have them integrated in the native Gnome environment.

Regards,
Ingmar
