## Rainlendar 2.8 BETA build 95

Posted by Rainy - 2010/09/19 05:35

---

Build 95 can be downloaded from here:

Windows (32-bit): Rainlendar-2.8.b95-32bit.zip  
Windows (64-bit): Rainlendar-2.8.b95-64bit.zip  
Linux TAR (32-bit): Rainlendar-2.8.b95-i386.tar.bz2  
Linux DEB (32-bit): rainlendar2-pro\_2.8.b95-1\_i386.deb  
Linux TAR (64-bit): Rainlendar-2.8.b95-amd64.tar.bz2  
Linux DEB (64-bit): rainlendar2-pro\_2.8.b95-1\_amd64.deb  
Mac OS X (Intel): Rainlendar-2.8.b95.dmg

This is beta version! It has not been tested.

### Changes:

- o The "Enable on startup" is now hidden on Mac and Linux since it's Windows only setting.
- o Added possibility to create, move and resize the events in day and week views with the mouse. Hold shift key down to create new events.
- o The mouse interaction in the schedule view can be disabled from the advanced options.
- o Changed the way the calendar is drawn on Linux to prevent black windows on newer versions of cairo.
- o Editing Remember The Milk's tasks could return an error even if everything succeeded. Fixed.
- o The %p will be converted to non-translated "AM"/"PM" is bitmap fonts are used in the time item.
- o Added Rainlendar\_ReadFile() function to the API which is able to read the file contents also from unicode paths on Windows.

Tested and works on Arch Linux with cairo 1.10.0. Thanks Rainy =).

Side-request, is it possible for md5sums of the downloads to be included with release announcements? Would assist those of us packaging the software for multiple architectures for various distros.

### Tested

- o The %p will be converted to non-translated "AM"/"PM" is bitmap fonts are used in the time item.

Only work in English language.

<http://www.rainlendar.net/cms/images/fbfiles/images/img-9d5d7a97f2ea7c616bb3347197da5dd7.jpg>

- o Added Rainlendar\_ReadFile() function to the API which is able to read the file contents also from unicode paths on Windows.

Tested not work.....

Photo not found and link to flickr.

Files can display file's link but can't display file's word inside.

evanade, There was a small bug in the %p replacing. I'll fix that in the next build. The photo widget doesn't use the new function so you still cannot use unicode paths with it. The file which is opened with Rainlendar\_ReadFile() must be in utf8 format or otherwise it cannot be displayed.

ngoonee, I'll see if the md5 sums could be included with the builds.

Rainy, I finally found my problem with the Skin addons install.

These were the steps:

- \* In the app folder I had b94.
- \* Closed Rainlendar2.
- \* Replaced all b94 files with b95.
- \* Launched Rainlendar2 again.

The skin was in English. Of course, it was reading the Shadow4 skin in the app folder, not that from the user folder. So, to "go back" to my previous skin, I installed the Widget and Languages addons. But with every install, the Shadow4 skin from app folder is copied to the user folder ("rebooted").

One way to avoid this problem is making a new user folder. Then copy the iCalendar files, add the windows (calendar, countdown, event list, etc.) and set the variables again. The other (what i made) is rename the shadow4 skin from the app folder.

Rainlendar should always use the version of the skin which has the most recent timestamp. So, after you install the first addon the skin is copied to your home folder and the addon is installed to it. The next addon will be then installed to the skin in your home folder since it will be more recent than the one in Rainlendar's skins folder. I just tried and this is exactly how it works on my computer so I not really sure why it doesn't work on yours. Can you try to reproduce this again and check the modified dates on the files before and after you install the addons?

If i try now, it works ok...

The timestamp of Shadow4 in app folder is "19/09/2010 12:43 p.m." (DD/MM/YYYY). But which time zone? I'm in Argentina, and now time zone is -3. If the skin file is from 12 p.m. GMT+0, then i can download the skin "before" and install an addon at 10 a.m GMT-3. I think that if Rainlendar2 checks difftime > 0, it will use the original skin instead the updated one. :huh:

I'm not sure of this, could be possible? :S

If this is possible, then i will need to wait a couple of hours until installing an update...

It seems that at least on Windows XP extracting a file from the archive keeps its local timestamp which I'd consider a bug. But since there probably isn't anything I can do about it you just need to wait for for few hours before applying the

---

addons.

It seems that Rainlendar prevents Outlook from closing.

Now when I close Outlook application while Rainlendar is running it still exists in list of processes and shows gray icon in tray "outlook is closing". I have to kill it manually. The same happens after sync with PocketPC (process and icon). If Rainlendar is not running, everything is OK.

Is Rainlendar doing something when you try to close Outlook (i.e. does the debug log show any activity)? Have you installed any addons to your Outlook which could be incompatible with Rainlendar?

=====

## Re:Rainlendar 2.8 BETA build 95

---

Completely nothing is in debug log. But it seems that the problem disappeared after I disabled all the add-ins in Outlook and than reenabled back. Strange is that it showed up after I updated the Rainlendar from b93 to b95.
