
Documentation Errors

Posted by he_the_great - 2010/09/22 17:42

Reading over some available Lua functions there are a few things that are wrong:

Rainlendar_ReadFile says it returns the file contents (UTF-8) but the example is assigning into a variable named md5, not very nice presentation.

Rainlendar_CreateComponent's description mentions what happens when the UID property is not given or the same as an existing, but the signature does not take a UID.

Thanks. I'll update those.
