## Connection Rainlendar with Mozilla Thunderbird

Posted by xotha - 2010/10/12 10:03

---

Hey hey,

I am brandnew here and use Rainlendar from the first time and bought the licence for the PRO-edition.

Works great !!! But... only by using MS-Outlook Which I don't use.

I normally use the Mozilla Thunderbird. Is it possible for you to create the link with this Moz TB??

Thanks in advance.

Xotha

You can share the same ics file with the Mozilla calendar and Rainlendar although I'm not sure if Mozilla can automatically detect changes if you make modifications in Rainlendar so you might have to reload the calendar manually in that case.

You can't sync Thunderbird (Lightning) and RL directly but you can do it via Google Calendar. Create a Google Calendar, set thunderbird to subscribe to it and do the same with RL.
