## Variable font size

Posted by Xilam - 2010/10/13 04:38

---

Hi!

(Sorry for my bad english I'm french...)

Can we attribute variable to a font size?

exemple:

skin.xml

...

...

elements.xml

...

...

digital\_clock.xml

The font size isn't link to the variable when I'm using rainlendar. This is normal?

Thanks to reply

Regards,

I tried what you say, but it didn't work... that's because in skin.xml you write: window="Digital Clock" and elements.xml isn't Digital Clock.

But, if you directly set:

...

...

It will work, but the variable monthSize will be global. If you have another window and you want a variable also named monthSize there will be a collision. But for only one window, there's no problem.

Maybe Rainy wanna make another kind of variable? ;)

It should work if you use a global variable (i.e. don't define the window for the variable).
