## Cursor to change to Hand (over clickable element)

Posted by Ciantic - 2010/10/16 15:11

---

I would like to see the cursor change to typical Hand when mouse is over clickable element. Especially as most of the elements are not buttons so it would make it easier to recognize them as clickable.

This would also be natural since all browsers do it.

At least for items which have a single click action it might be useful. I'll check if it's possible to implement this.
