
Multiple clocks/time zones

Posted by obscure - 2010/10/17 19:36

Is it possible to get RL to display more than one clock/time zone?

Yes and no. Which skin are you using?

If you're using Shadow4: right click -> options -> skins -> advanced -> add two or more clock from available skins to active skin. On each digiclock, click on Options, and change the time zone.

If you're using Chromophore: there's no option (yet).

Are you using another skin?

Rainy: the analog clock doesn't have a timezone. The only missing thing is the variable %Timezone% on skin.xml and timezone="%Timezone%" on clock.xml

Thanks for the tip it works great.

Actually I am using a mix of skins - Shadow4 for most stuff plus the Analogue clock from Chromophore (as there isn't an analogue in Shadow4). I added two more digi clocks and edited the timezone as you suggested and it works.

one follow up question - is it possible to add a name/title to a clock (EG London, Vancouver, Paris etc.)?

I'll add the time zone and text label support for the clock in the Chromophore skin. Here's the other thread about adding text to the Shadow4's clock:

Hi, I'm using <http://customize.org/rainlendar/skins/63524>
along with this edit <http://customize.org/rainlendar/skins/67484>
that allows for multiple digital clocks.

Can anyone please help me set different timezones
for the additional digital clocks?

It would be useful for me to have Manila, Tokyo, Taiwan, and Seoul displayed in addition to my local time. As you can see, all five of my clocks are set to my local time :(I would greatly appreciate any help or advice, thanks much! :cheer:

Recommended that you use the 'World Time' which is in 'Addons for Shadow4 skin'. It supports customize four time zone.

<http://www.rainlendar.net/download/Shadow4-Widgets.r2skin-addon>

Hi,

I would like to use this add-on, but when I click on the link I get a new browser window full of text and I dont know what to do with it. :(

Can you explain to me how to use it?

tankyou

Can you try: Right-Click then save it ?

If cannot, Please attach the browser's screenshot let me see.

Posted by magus - 2014/03/18 10:50

I get this, when I click on the link.

It happened the same with other links to addons that I wanted to use as I saw them in the forum.

Ok,

I right clicked on the link, chose save as and it worked.

Thankyou again

Sorry, it finally didnt worked. When I saved it it was saved as a shadow4 addon and when I executed it, the application told me that the installation was sucesfully, so I though everything was ok, but when I have tried to use it, it appears with the name: Text file, and this is what I get a box with the text: Text file: no file given...

=====

Re:Multiple clocks/time zones

Posted by anoob - 2014/03/18 13:13

First, the file must be saved as *.r2skin-addon, I think you have do it.

Then, if expand Shadow4, have you see any new windows at "Available skins" ? hmm, I think you also have.

You said: "but when I have tried to use it, it appears with the name: Text file, and this is what I get a box with the text: Text file: no file given...".

I think you are activate "Text File" window, not "World Time" window. Please try again, and activate the correct window "World Time".

Re:Multiple clocks/time zones

Posted by magus - 2014/03/18 13:25

Now it's ok.

In fact what happened is that two options appeared, "text file" and "world time", so as I saw "text file" I used this one whitout realize that there was another one new option.

Thanks again.

Just one question.

Will the hour change correctly with the daylight saving time change occurring next week?

I say that because I see that you use just the UTC plus or minus something...

=====

Re:Multiple clocks/time zones

Posted by anoob - 2014/03/18 13:46

I am not sure.

But, see image, You can also use timezone string.

Re:Multiple clocks/time zones

Posted by magus - 2014/03/18 14:08

In that case I dont think it will make the change automatically, because here in Spain we use the CET (Central European Time) that it is always UMT +1, but after the daylight saving change we use the CEST (Central European Summer Time) that it is always UMT +2, So I will have to make the change manually from CET to CEST...

=====

Re:Multiple clocks/time zones

Posted by magus - 2014/03/18 14:15

Maybe if at least the +1, +2 or -1, -2, etc.. option was linked to the local time instead to the UMT, it will work, supossing all the countries make the daylight saving change the same day. That I guess most of them make, because it is defined being the last sunday of March and the last Sunday of October, at less here and in most European countries if not all of them.
