
Attention needed!

Posted by SyavsoN - 2006/12/14 12:04

1. There are no specific strings in the rainlendar2.pot:

"Medical"

Windows -> "Calendar Alt-1", "Event List Alt-2", "Todo List Alt-3"

Calendars -> "Default Ctrl-1"

Also, there is a small mistake in string "Restore was succesful" successful is the right one ;)

And I have one question...

I havn't translated the Rainlendar into Ukrainian (only 91%) completely because of the PoEdit internal error...

Have someone encountered with such a problem...

18:02:28: ...Rainlendar for Desktop\Translate\Ukrainian\uk_UA\rainlendar2.po:756: number of format specifications in 'msgid' and 'msgstr' does not match

18:02:28: msgfmt: found 1 fatal error

Can someone help me?

Changes to the localized strings will be made the next time in version 2.1. Although I'm not sure if it's possible to translate the window and calendar names since they are user defined strings.

The error means that the %s is missing from the translated version of the string "The %s was installed succesfully!...".

Thank you very much! :)

I think I will end the translation tomorrow!
