## Start/due time in Tasks

Posted by JSimR - 2010/10/21 14:02

---

Rainlendar Pro v2.8(b96) 32 bit (with licence) on Ubuntu 10.04

Rainlendar allows create tasks with Due date < Start Date!

Can you give me steps how to reproduce the problem?

For item added by QuickAdd with Due Time set.  
Then, edit the item for a new Start Time.

I only tested on Outlook calendar, as I cannot quick-add new item/event to another calendar.

p/s:  
Is there an option to set the default calendar for QuickAdd?  
Or any QuickAdd command to select calendar?  
If not, may consider to add both setting in next build. I think it is useful for multi-calendar user.

True, it's possible to get into this kind of situation if you define just one of the date fields. I'll fix that.

You should be able to choose the calendar where the events go if you make a new event template, choose the calendar for it and name the template as "QuickAdd".

for it and name the template as "QuickAdd".

This doesn't work for me: I have two different calendars for events and task. I've tried to create two templates for events and tasks (with the corresponding calendars), but as soon as I add a new task or event the calendar of the template isn't used.

I tried this but didn't notice any problems. Are you using the latest version? Can you give step by step instructions how to reproduce the error?

I hope this has not already been answered but if it has I was unable to find it.

I entered the start of Daylight Savings as 2:00 AM on March 13th and what came up was 1:00 AM as the start.

Fiddling around with the time for this event I found I could enter 1:00 AM or 3:00 AM or anything other than 2:00 AM and they would all work fine.

Does anyone know why 2:00 AM will not record correctly.

Many Thanks.

On the DST change day the period from 2:00 to 2:59 doesn't exist so you can't create any events during that time.
